EDUCATION

Indian Institute of Information Technology, Lucknow Dec 2021 – Jul 2025
B.Tech in Computer Science and Artificial Intelligence (CGPA: 8.7/10) Lucknow, India

TECHNICAL SKILLS

Languages: Java, C++, C, JavaScript, SQL, Python
Backend / Frameworks: Node.js, React, gRPC, REST APIs, LangGraph, FastMCP
Databases / Cloud: Elasticsearch, MySQL, MongoDB, Spanner, Qdrant, AWS Bedrock, CloudWatch
Core Concepts: Data Structures and Algorithms, DBMS, OOP, Computer Networks

EXPERIENCE

Software Development Engineer Bangalore, India
PropertyGuru Nov 2025 – Nov 2026

- Contributed to a shared, cached profile service that unified agent-profile access across marketplace products, simplifying integrations and maintenance while reducing redundant profile requests by 30%.
- Built a high-throughput data migration service that synchronized real-time data from heterogeneous sources into Elasticsearch at 50K records/minute, enabling zero-downtime migrations and reducing migration-related support tickets to nearly zero.
- Automated shortlist cleanup and listing-expiry notifications with production cron jobs; introduced load testing, dry-run validation, duplicate-send safeguards, and market-specific rollouts, retired legacy workflows, and reduced manual effort by 20%.
- Developed an LLM-powered Node.js upgrade agent that analyzes code for version-specific breaking changes and generates targeted patches, streamlining upgrades and helping mitigate risks from outdated dependencies.
- Delivered 10+ production fixes across marketplace data synchronization, reverse synchronization, transit-related location data, privacy-preserving property-location masking, missing API fields, and duplicate validation; removed an obsolete database table containing approximately 10 GB of data.

Software Development Engineer Intern Bangalore, India
Google Jan 2025 – Jul 2025

- Built Hard Bundles in an internal product-configuration system using Java, gRPC, and Spanner, enabling dependent SKUs to behave as one unit; reduced API calls per quote by 3–5x and improved quoting efficiency by 40%.
- Added versioned bundle timelines and reverse lookups to improve data consistency and simplify configuration debugging.

Software Development Engineer Intern Hyderabad, India
Amazon May 2024 – Jul 2024

- Enhanced Alexa AACS observability with rule-level metrics and AWS CloudWatch dashboards using Java and TypeScript, reducing incident detection time by 30%.
- Collaborated with software engineers and on-call teams to define service health indicators and alerts for production workloads.

PROJECTS

Oracle-MAS: Multi-Agent System with Extensible Data Sources GitHub
Built LangGraph query routing and agent-to-agent workflows; connected retrieval tools using FastMCP and MultiServerMCPClient with AWS Bedrock (Llama 4 Scout), Qdrant, and Tavily for document and web retrieval.

Dev-Link-Hub GitHub
Built a React, Node.js, and MongoDB resource manager with JWT/bcrypt authentication, REST APIs, search/filtering, and keyword-based auto-tagging.

ACHIEVEMENTS

- CoachIn Mentee 2023: Selected among India's top 60 girls from 7,500+ applicants.
- LeetCode Knight: max rating 1911, top 5.59%; CodeChef 3-star: max rating 1630.
- Google Girl Hackathon 2023: Top 2.5% through ideathon; TechGig Code Gladiators 2024: rank 308/17,000+.
- Harvard WEAmplify Scholar 2023 and GHC Scholar 2024: Full scholarships to attend global women-in-tech conferences.
